Purpose

The purpose of this project is to evaluate the functionality, usability, and reliability of the El Al mobile application.

Application overview

El Al is the national airline of Israel, providing international passenger and cargo flights. Its digital platforms (mobile app and website) are designed to help customers manage their travel easily from booking to boarding.

C46	Check that the Issue Credit Voucher button is working.
C47	Check that the Cancel Flight button is working.
C48	Check that the Change Flight button is working.
C50	Check that the Change Flight button works
C51	Check that the Meals button works
C52	Check that the Manage Booking button works
C53	Check that the Save Flight to Calendar button works
C54	Check that the Invoice Issuance button works
C55	Check that the Seat Selection button works
C56	Check that the Baggage button works
C57	Check that the Upgrade Center button works
C58	Check that the Check-in button works
C59	Check that the SIM/eSIM button works
C60	Check that the Bookings button is active
C61	Check that the Health button works
C62	Check that the Travel button works
C63	Check that the Currency button inputs numbers
C64	Check that the Travel Insurance button works
C65	Check that the SIM button works
C66	Check that the In-flight Duty Free button works
C67	Check that the Car Rental button works
C68	Check that the Foreign Currency Rental/Exchange button works
C69	Check that the Waze button works
C70	Check that the Maps button works
C71	Check that boarding details appear on the current ticket
C72	Check that the Useful Information button works
C73	Check that the Security Situation Updates button works
C74	Check that the Rescue Flight Status to Israel button works
C75	Check that the Fly Card button works
C76	Check that the El Al Young button works
C77	Check that the Direct Flights button works
C78	Check that the Sales button works
C79	Check that the Book a Winter Vacation button works
C80	Check that the Fly Plus button works
C81	Check that the In-flight Duty Free button works
C82	Check that the Login button works
C83	Check that the Origin button works
C84	Check that the Destination button works
C85	Check that the Departure button works
C86	Check that the Return button works
C87	Check that the Number of Passengers button works

C88	Check that the Coupon Code button works
C89	Check that the Frequent Flyer Payment button works
C90	Check that the Search Flight button works
C91	Check that the Origin button works
C92	Check that the Destination button works
C93	Check that the Departure button works
C94	Check that the Number (field/button) works
C95	Check that the Number of Passengers button works
C96	Check that the Coupon Code button works
C97	Check that the Frequent Flyer Payment button works
C98	Check that the City button works
C99	Check that the Destination button works
C100	Check that the Departure button works
C101	Check that the Origin button works
C102	Check that the Tel Aviv button works
C103	Check that the Return button works
C104	Check that the Number of Passengers button works
C105	Check that the Coupon Code button works
C106	Check that the Frequent Flyer Payment button works
C107	Check that the Search Flight button works
C108	Check that the One-Time Code button works
C109	Check that the Password button works
C110	Check that the Login button works
C111	Check that the Join Frequent Flyer Club button works
C112	Check that the My Passengers List button works
C113	Check that the My Messages button works
C114	Check that the My Flights button works
C115	Check that the Join Fly Card button works
C116	Check that the Menu button works
C117	Check that the Settings button works
C118	Check that the Search button works
C119	Check that the Check-in button works
C120	Check that the Flight Tracker button works
C121	Check that the Spring Sale button works
C122	Check that the All About El Al Young button works
C123	Check that the Register for El Al Young button works
C124	Check that the Frequent Flyer Club button works
C125	Check that the Join the Club button works
C126	Check that the Join and Fly to Various Destinations button works
C127	Check that the Bonus Price List button works
C128	Check that the Benefits for Premium Members button works
C129	Check that the Points Percentage button works

- C130 Check that the Fly Plus Benefits button works
- C131 Check that the Flights up to \$299 button works
- C132 Check that the Auction Arena button works
- C133 Check that the Book a Flight button works
- C134 Check that the Book a Car button works
- C135 Check that the Travel SIM button works
- C136 Check that the Information & Actions button works
- C137 Check that the Baggage and Carry-on Bags button works
- C138 Check that the In-flight Entertainment System button works
- C139 Check that the El Al Lounges button works
- C140 Check that the Request a Credit Voucher button works
- C141 Check that the Restore/Retrieve Invoices button works
- C142 Check that the Consumer Protection Law link/button works
- C143 Check that it is not possible to enter a return date earlier than the departure date.
- C144 Check that searching without selecting a destination triggers a clear error message.
- C145
- C146 Check that it is not possible to enter a phone number with letters.
- C147 Check that it is not possible to enter an email without a valid format
- C148 Check that attempting to book a flight for a past date is blocked.
- C149 Check that it is not possible to select more than 9 passengers (system limitation).
- C150 Check that entering an expired coupon code displays the message
- C151 Check that it is not possible to proceed to payment without checking “I agree to the terms of use.”
- C152
- C153 Check that entering invalid credit card details (e.g., missing CVV) stops the process.
- C154 Check that attempting to perform check-in too far in advance is blocked.
- C155 Check that entering the Name field with numbers only displays an error.
- C156 Check that it is not possible to select a seat that is already marked as occupied.
- C157 Check that rapid double-clicking the “Pay” button does not create a duplicate charge.
- C158 Check that when switching to Dark Mode, all text remains readable.
- C159 Check that during loading, a spinning airplane icon or a progress bar is displayed.
- C160 Check that the “Back” button is always located in the same place across all screens.
- C161
- C162 Check that the spacing between seat selection buttons allows easy tapping with a finger.
- Check that homepage promotional banners do not hide navigation buttons.
- Check that on the “Passenger Details” page, there is a clear visual separation between passengers (divider line or different background).
- Check that during fast scrolling, destination images load smoothly without flickering.

	Check that the flight status colors (on time, canceled, delayed) are clear (green/red/orange), and that the bottom navigation bar (Home, My Trips, Check-in) remains fixed when navigating between screens.
C163	
C164	Check that input fields change their border color while typing.
C204	Check that it is not possible to enter an age of "150" in the passenger age field.
C205	Check that it is not possible to use characters like <script> in text fields (XSS prevention).
C206	Check that it is not possible to book a flight when the passport is expired (based on the entered date).
C207	
C208	Check that it is not possible to perform check-in twice for the same flight.
C209	Check that it is not possible to add baggage with negative weight.
C210	Check that it is not possible to enter only spaces in the "Last Name" field.
	Check that it is not possible to pay with an expired credit card.
C211	Check that it is not possible to select a Business class seat with an Economy ticket without additional payment.
C212	Check that disabling location permissions does not prevent the app from working (only disables automatic suggestions).
C213	Check that it is not possible to enter a frequent flyer number from a competing airline.
C214	Check that entering special characters (emojis) in input fields is blocked or properly handled.
C215	Check that clicking "Back" in the payment browser prompts a confirmation before exiting.
C216	
C217	Check that submitting an empty form does not cause a crash.
C218	Check that it is not possible to select more than one meal per passenger.
C219	Check that it is not possible to enter a future date of birth for a passenger.
C220	Check that it is not possible to complete a booking without contact details (phone or email).
C221	Check that scanning an image that is not a passport shows a "Document not recognized" message.
C222	
C223	Check that changing the device language while the app is open does not cause data loss.
C224	Check that it is not possible to use a discount code more than once.
	Check that entering a passenger name that is too short (one letter) shows a warning.
C225	
	Check that it is not possible to proceed if a seat is not selected (for flights where it is mandatory).
C226	
C227	Check that disconnecting the charger from the device does not affect data loading processes.
C228	
	Check that it is not possible to enter a passport number with invalid characters (non-alphanumeric).
C229	
	Check that the "flight full" error message appears before the payment stage.
	Check that if a seat is taken by another user at the last moment, the system updates and prompts for a new selection.
	Check that it is not possible to close the "Terms & Conditions" window without scrolling to the end (if required).

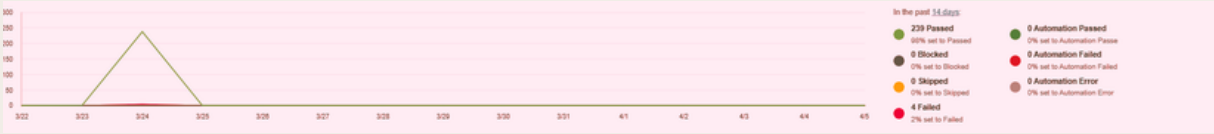

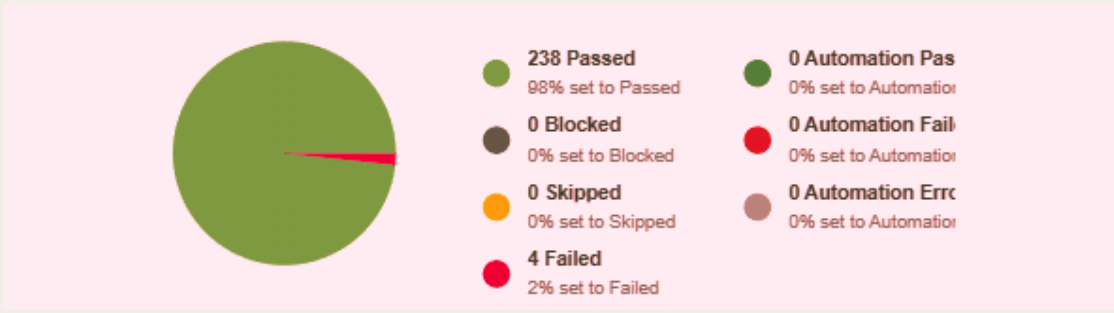

- C230 Check that the app remains stable after one hour of inactivity on the payment screen.
- C165 Check that the app works properly on devices with a small screen (such as iPhone SE).
- C166 Check that on foldable devices, the display adapts when switching between folded and unfolded modes.
- C167 Check that the app works on older Android versions (e.g., version 10).
- C168 Check that the app is compatible with Data Saver mode on the device.
- C169 Check that the app displays well when High Contrast mode is enabled in the operating system.
- C170 Check that rotating the screen to landscape mode on tablets presents the flight list conveniently.
- C171 Check that the app can be used when a VPN is active.
- C172 Check that the app does not crash on devices with a low-performance processor.
- C173 Check that push notifications are received on smartwatches connected to the device.
- C174 Check that the app works properly on iOS devices with a notch, and that buttons are not cut off.
- C175 Check that the app supports use with a stylus on supported devices.
- C176 Check that the app supports use with a stylus on supported devices.
- C177 Check that changing the time zone in device settings updates flight times in the app.
- C178 Check that the app works properly in Split Screen mode.
- C179 Check that after an OS update, all user data is preserved.
- C180 Check that the app correctly detects the device's GPS settings to display the nearest airport.
- C181 Check that the app does not drain battery excessively when running in the background.
- C182 Check that third-party keyboards (such as SwiftKey) can be used in text fields.
- C183 fields.
- C184 Check that the app does not crash when installed on an external SD card (Android).
- C185 Check that Face ID or Touch ID can be used on Apple devices to log in.
- C186 Check that the app notifies the user if their version is too outdated and requires an update.
- C187 Check that flight details purchased on the El Al website are synchronized to the app within seconds.
- C188 Check that a booking confirmation is automatically sent to the user's email via the Mail Server interface.
- C189 Check that payment via Bit or PayPal returns the user to the app upon completion.
- C190 Check that the "real-time flight status" API displays data identical to that on the Airports Authority website.
- Check that the flight date/time can be exported directly to the device calendar (Google Calendar / iCal).
- Check that scanning a credit card with the camera correctly fills in the number in the payment interface.

- C191 Check that clicking the “Share” button opens the device’s sharing interface (e.g., WhatsApp, Telegram).
- C192 Check that if the seat selection API server is down, a proper error message is displayed.
- C193 Check that the SMS interface sends a verification code (OTP) within less than 30 seconds.
- C194 Check that displaying ads or partner offers (insurance/car rental) does not freeze the app.
- C195 Check that connection to the Frequent Flyer Club retrieves the updated points balance from the central server.
- C196 Check that downloading the boarding pass saves a valid file in the device’s “Downloads” folder.
- C197 Check that the chat interface with a representative (if available) allows sending files/images.
- C198 Check that the app detects if the user is already logged in on another device and responds accordingly.
- C199 Check that the payment processing interface automatically detects whether the card is Visa or MasterCard based on the first digits.
- C200 Check that updating passport details in the app is also updated on El Al’s central servers.
- C201 Check that clicking a link in an El Al SMS opens the app directly to the relevant page (Deep Link).
- C202 Check that the Weather interface displays the correct weather at the flight destination.
- C203 Check that performing Logout properly terminates the session with the server (Session Termination).
- C231 Check that the entire flight search and booking process can be completed with one hand (thumb-friendly).
- C232 Check that the app suggests “recent searches” immediately when tapping the search bar.
- C233 Check that when entering a credit card number, the keyboard automatically switches to a numeric keypad.
- C234 Check that there is a “Clear All” button in the filters to reset results in one click.
- C235 Check that error messages are user-friendly and not technical (e.g., “Oops, a digit is missing in the phone number” instead of “Error 404”).
- C236 Check that it is possible to view baggage allowance details without leaving the flight selection screen.
- C237 Check that the app saves frequent passenger details, so passport information does not need to be re-entered each time.
- C238 Check that if there is a layover, the waiting time is highlighted in a different color so the passenger does not miss it.
- C239 Check that it is possible to switch between tabs (e.g., “Flight Details” and “Price Details”) using a swipe gesture.
- C240 Check that the device’s physical Back button does not exit the app during payment without a warning.
- C241 Check that the device’s physical Back button does not exit the app during payment without a warning.

- C242 Check that the font size of "Cancellation Terms" is readable and not too small.
- C243 Check that there is a clear visual confirmation (e.g., a checkmark or animation) when an action is successful.
- C244 Check that the app provides quick links to Check-in on the home page when a flight is approaching.
- C245 Check that the progress bar (step indicator) clearly shows how many steps remain until booking completion.
- C246 Check that the app language can be changed easily from the settings menu (within up to 2 taps).
- C247 Check that during long loading times, tips or interesting facts about flights are displayed to improve the waiting experience.
- C248 Check that important buttons (e.g., "Continue") are always located at the bottom of the screen and easily reachable.
- C249 Check that fields completed successfully are marked with a small green indicator to show progress.
- C250 Check that the full booking summary (including taxes) is visible before the final "Pay" click.
- C251 Check that the app remembers the selected seat even if the user briefly exits and returns (within the same session).
- C252 Check that all navigation buttons (Home, My Flights) include labels for screen readers (e.g., VoiceOver).
- C253 Check that the "Search Flight" button can be activated via double tap anywhere on the button.
- C254 Check that the app supports Invert Colors mode without losing critical information.
- C255 Check that pop-up messages remain visible long enough for users with cognitive disabilities to read them.
- C256 Check that color is not the only way to convey information (e.g., add an error icon alongside red color for color-blind users).
- C257
- C258 Check that the keyboard focus moves in a logical order (top to bottom, right to left) between input fields.
- C259 Check that tutorial videos (if any) include closed captions.
- C260 Check that it is possible to zoom in on the boarding pass screen to make details (e.g., gate number) easier to read.
- C261 Check that all required fields are marked with text (e.g., "Required") and not just an asterisk (*).
- C262 Check that the app does not use overly fast animations that may disturb sensitive users.
- C263 Check that image alt text descriptions clearly describe destinations (e.g., "Image of Big Ben in London").
- C264
- C265 Check that error messages are read aloud immediately by the screen reader when they appear.
- C266 Check that it is possible to navigate the seat map using swipe gestures only.
- Check that the app allows disabling vibrations or visual effects via accessibility settings.
- Check that long texts (e.g., terms of use) are divided into short paragraphs for easier reading.

- C267 Check that input fields include clear placeholders (hint text explaining what to enter).
- C268 Check that tapping the passport icon provides audio feedback: "Scan passport now."
- C269 Check that the system can process 500 flight bookings per minute without creating duplicates in the database.
- C270 Check that the "My Flights" page load time does not exceed 3 seconds even when 2,000 users view it simultaneously.
- C271 Check that the checkout process remains stable and fast even with hundreds of simultaneous buyers in queue.
- C272 Check that sending push notifications to 50,000 users at once does not delay other app operations.
- C273 Check that under high load, the server prioritizes critical actions (like purchases) over secondary actions (like viewing weather).
- C274 Check that the seat selection API returns real-time data even when dozens of passengers try to select the same seat simultaneously.
- C275 Check that the app does not display "Timeout" messages to users as long as load is within defined limits (e.g., up to 10,000 active users).
- C276 Check that the Frequent Flyer database can update points for thousands of users simultaneously after a flight.
- C277 Check that the search server response time is not significantly affected when thousands of searches with complex filters are performed simultaneously.
- C278 Check that the Chatbot system (if present) responds to 100 users simultaneously without freezing.
- C279 Check that downloading PDF files (boarding passes) works smoothly even when the server is under heavy download load.
- C280 Check that the system can handle 300 seat change requests per minute during check-in opening.
- C281 Check that data synchronization between the app and website remains immediate even during high traffic periods.
- C282 Check that server memory usage (RAM) stays within safe limits and does not grow uncontrollably under continuous load (Endurance testing).
- C283 Check that passport scanning in the app does not slow the server when thousands of passengers check in simultaneously.
- C284 Check that during high load, new users can log in without significant delay.
- C285 Check that sending booking confirmation emails does not take more than 2 minutes under heavy purchase load.
- C286 Check that the GPS system for nearby airports does not overload the CPU when many users are active.
- C287 Check that the GPS system for nearby airports does not overload the CPU when many users are active.
- C288 Check that automatic server data backup does not slow down the app while load is occurring simultaneously.
- Check that under extreme load, the system can automatically activate additional servers (Auto-scaling) without the user noticing any impact.

metrics

BUGS

REPORTS

[DEV-10] Booking confirmation emails take more than 2 minutes to be sent

under heavy load Created: 25/Mar/26, Updated: 25/Mar/26

Status:	To Do Bug
Project:	Tracking
Components:	None None
Affects versions:	None
Fix versions:	

Type:	Bug	Prior ity:	Medium
Reporter:	שרה פרדה	Assignee:	שרה פרדה
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Rank:	0 i00047:
-------	-----------

Description

The system fails to meet the performance benchmark for email delivery during peak traffic (heavy purchase load). Confirmation emails are delayed significantly, exceeding the 2-minute threshold.

Steps to Reproduce

1. Simulate a heavy load environment (using JMeter or Locust) with [2] concurrent users making bookings.
2. Complete a successful booking transaction.
3. Measure the time elapsed from the "Booking Confirmed" screen until the email is received in the user's inbox.
4. Repeat the process for multiple test accounts.

Expected Result

Under any load conditions, the booking confirmation email should be dispatched and received within **under 2 minutes**.

Actual Result

- Emails are being delivered with a delay of [2] minutes (5-10 minutes).
- In some cases, the mail server queue becomes backlogged, causing even longer delays.

[DEV-11] App UI/Functionality issues when resizing in Split Screen mode

Time Spent:	Not Specified		
Original estimate:	Not Specified		

Rank: 0|i0003z:

Description

The application currently allows a user to select and save more than one meal per passenger during the booking process. The business logic should restrict each passenger to exactly one meal selection.

Steps to Reproduce

1. Navigatetothe "**Meal Selection**" screen during the booking flow.
2. For "Passenger 1", select a meal (e.g., "Vegetarian Meal").
3. Attempttoselect another meal (e.g., "Kosher Meal") for the same passenger.
4. Proceedtothe summary/checkout page.

Expected Result

The systemshouldfollow a "Radio Button" logic: selecting a new meal should automatically deselect the previous one. Only one meal per passenger should be reflected in the final selectionand total price.

Actual Result

- The UIallows multiple meals to be highlighted/selected simultaneously for one passenger.
- Both meals are added to the booking summary.
- [Optional: The total price is incorrectly updated to include both meals].

Environment

[DEV-8] [Failure to authenticate using Face ID / Touch ID on iOS devices](#)

Status:	To Do Bug
Project:	Tracking
Components:	None None
Affects versions:	None
Fix versions:	

Type:	Bug	Prior ity:	Medium
Reporter:	שרה פרדה	Assignee:	Unassigned
Resolution:	Unresolved	Votes:	0
Labels:	None		
Remaining Estimate:	Not Specified		
Time Spent:	Not Specified		
Original estimate:	Not Specified		

Rank:	0 i0003r:
-------	-----------

Description

The user is unable to complete the login process using biometric authentication (Face ID or Touch ID). The app either fails to trigger the system biometric prompt or does not proceed to the Home Screen after a successful scan.

Steps to Reproduce

1. Launch the app on an iOS device with Face ID/Touch ID enabled.
2. On the Login screen, tap the **"Biometric Login"** icon/button.
3. Perform a biometric scan (Face ID or Touch ID).
4. Observe the application's behavior.

Expected Result

The iOS biometric prompt should appear immediately. Upon successful authentication, the user should be automatically logged in and redirected to the Home Screen.

Actual Result

- **Scenario A:** The Face ID/Touch ID prompt does not trigger at all, even though permissions are granted.
- **Scenario B:** The system successfully authenticates the user, but the app remains on the Login screen.
- **Scenario C:** The app crashes immediately after a successful biometric scan.

RECOMMENDATION AND CONCLUSION

Conclusion & Recommendations

:Conclusion

The El Al mobile application demonstrates high functional stability with a 98% test pass rate (238 out of 242 tests passed). The core functionalities, including booking and passenger management, are performing reliably. While the system is robust, the testing phase identified four specific defects related to split-screen usability, biometric authentication, business logic for meal selection, and email confirmation latency under heavy load.

:Recommendations

Fix Biometric Authentication: Prioritize the resolution of Face ID/Touch ID issues to ensure a seamless and secure login experience for iOS users.

Correct Business Logic: Address the meal selection bug to prevent logistical errors and potential financial loss during the catering process.

Performance Optimization: Optimize the backend mail server to ensure that confirmation emails are delivered within the 2 minute threshold, even during peak traffic, to maintain customer confidence.

:Final Release Decision

.Approved for Release

Despite the minor bugs identified, the application's core features are stable and provide a high-quality user experience. The remaining issues are categorized as non-critical and can be addressed in a hotfix or the next scheduled version.
